HySecurity Introduces “Smart” Pad-Mounted Swing Gate Operator: SwingSmart DC™

On May 1, 2009 HySecurity officially introduced SwingSmart DC 20. The electromechanical, pad-mounted, battery backup swing gate operator meets the same standards as the heavy duty, hydraulic gate operators on which HySecurity’s 30-year industry reputation is built.

“Installers were asking for an easy to install, intelligent, durable, and reliable swing gate operator specifically for residential and commercial applications,” says Richard Woltjer, Vice President of Marketing at HySecurity. “We’re giving them everything they asked for and more. They will be shocked when they realize how easy we’ve made installing and programming this operator.”

Providing an easy installation, regardless of installer experience level was one of HySecurity's top priorities when developing SwingSmart. From the extra large conduit cutout and chassis carrying handles to the durable and easy to remove clamshell cover, HySecurity engineered powerful and demanded installer benefits into SwingSmart. The swing gate operator offers time saving features including an easy adjustment linkage arm, forgiving swivel connection between arm and gate bracket, intelligent *Smart DC Controller™*, auto-synchronizing gate technology, full 32 character LCD, easy to use control board programming buttons, and more.

“The machines have a forgiving arm geometry that allows for variations in site conditions,” says Russell Enos of Citiworks Inc. who has 24 years of experience in access controls. Citiworks Inc. was chosen from hundreds of applicants for involvement in the SwingSmart beta testing program which began in 2008. One early SwingSmart was installed at a high security Exxon Mobile dock in Rhode Island and continues its high cycle, trouble free operation today.

SwingSmart will reliably operate large, heavy gates in the coldest, hottest, most humid, driest, saltiest, brutal environments. Joe Kuppe, President of Barnum Gate Services, Inc. in Forest Lake, MN was another critical participant in SwingSmart’s extensive beta testing program. “We were impressed with the installation and blown away by the toughness and strength of such a small operator moving our 1200 lb. gate,” says Kuppe. “We experienced temperatures of 30 degrees below zero this winter and SwingSmart never once gave us any issues.”

HySecurity is currently working to fulfill hundreds of SwingSmart pre-orders. SwingSmart is available for purchase through all HySecurity authorized distributors. To find a distributor near you, contact HySecurity at (800) 321-9947.
